

Triple Service Valve Assembly

SEE VICTAULIC PUBLICATION 10.01 FOR DETAILS

Victaulic Tri-Service valve is an assembly (*shipped as individual components*) of a standard Victaulic butterfly or Vic-Plug™ valve and a check valve. This combination provides shut-off, throttling with positive mechanical memory and non-slam check service in one unit. The Series 779 check valve features accurate flow measurement capabilities plus spring assisted closing in a high flow design. The venturi-like inlet is drilled, tapped and plugged, ready to receive the flow measuring taps (included).

Triple seal butterfly valve design eliminates the packing commonly found in many globe-type combination units. Infinitely variable and latchlock handles are available for 2 ½ – 8" / 65 – 200 mm sizes. Low torque gear operator eases manual operation and actuation costs. Butterfly/check valve assemblies are available on all sizes from 2 ½ – 12" / 65 – 300 mm. Assembly with either Style 07 Zero-Flex® rigid couplings or Style 77 standard flexible couplings provides the option of rigidity or a flexible connection for noise/vibration isolation.

Plug/Check combinations are available with manual handles for 3 – 8" / 80 – 200 mm sizes and with gear operators for 3 – 12" / 80 – 300 mm sizes.

For 3 – 12" / 80 - 300mm systems, Style 307 transition couplings directly join Vic-Plug to the check valve and steel piping system.

Working pressures for 2 ½ – 12" / 65 - 300mm sizes of butterfly/check combinations are 300 psi/2065 kPa and 175 psi/1200 kPa for plug/check combinations. All configurations can be installed horizontally or vertically.

All butterfly and plugs for triple service assemblies are available with memory stop.

NOTE: When using Series 716 valves in place of Series 779, flow data, end-to-end dimensions and weights are the same.

Note: Assembly is provided with either Style 07 Zero-Flex rigid couplings or Style 77 standard flexible couplings. Specify choice when ordering.

Triple Service Valve Assembly

PERFORMANCE

Tri-Service Butterfly/Check Valve Combination

NOTE: Placement of check valves too close to sources of unstable flow will shorten the life of the valve and potentially may damage the system. To extend valve life, valves should be installed a reasonable distance downstream from pumps, elbows, expanders, reducers or other similar devices. Sound piping practices dictate a minimum of five (5) times the pipe diameter for general use. Distances between three (3) and five (5) diameters are allowable provided the flow velocity is less than 8 1/2 m per second (2.4 mps). Distances less than three (3) diameters are not recommended and will violate the Victaulic product warranty.

Tri-Service Plug/Check Valve Combination

NOTE: Placement of check valves too close to sources of unstable flow will shorten the life of the valve and potentially may damage the system. To extend valve life, valves should be installed a reasonable distance downstream from pumps, elbows, expanders, reducers or other similar devices. Sound piping practices dictate a minimum of five (5) times the pipe diameter for general use. Distances between three (3) and five (5) diameters are allowable provided the flow velocity is less than 8'2.5m per second (2.4 mps). Distances less than three (3) diameters are not recommended and will violate the Victaulic product warranty.

Triple Service Valve Assembly

IMPORTANT INSTALLATION CONSIDERATIONS

For installing a Victaulic triple service valve assembly into a piping system, follow the instructions supplied with the coupling. Refer to the notes below for applications/limitations.

DO NOT INSTALL BUTTERFLY VALVES INTO THE SYSTEM WITH THE DISC IN THE FULLY OPEN POSITION.

When using valves for throttling service, Victaulic recommends the disc or plug be positioned no less than 30 degrees open. For best results, the disc or plug should be between 30 and 70 degrees open. High pipeline velocities and/or throttling with the disc or plug less than 30 degrees open may result in noise, vibration, cavitation, severe line erosion, and/or loss of control. For details regarding throttling services, contact Victaulic.

Victaulic recommends that flow velocities for water service are limited to 20 ft/sec/6.1 m/sec. When higher flow velocities are necessary, contact Victaulic. When dealing with flow media other than water, contact Victaulic.

Triple Service with Butterfly Valve

Victaulic Butterfly Valves are designed with grooved ends for use with grooved pipe couplings. If flange connections are required, refer to the following notes regarding Vic-Flange Adapter restrictions.

- Style 741 Vic-Flange Adapters can be used on all sizes Vic-300 MasterSeal Butterfly Valves.
- Style 743 Vic-Flange Adapters cannot be used with Vic-300 MasterSeal Butterfly Valves. A No. 46 groove by ANSI Class 300 flange adapter is required.

Triple Service with Plug Valve

Vic-Plug valves are designed with rigid radius grooved ends for use with Victaulic Style 31 AWWA size couplings or Style 307 IPS/AWWA Transition couplings. If flange connections are required, refer to the following notes regarding Vic-Flange adapter restrictions.

- Style 341 Vic-Flange adapters can be used on all size Vic-Plug valves for ANSI Class 125/150 lb. flange connections.

Triple Service Valve Assembly

INSTALLATION

Reference should always be made to the I-100 Victaulic Field Installation Handbook for the product you are installing. Handbooks are included with each shipment of Victaulic products for complete installation and assembly data, and are available in PDF format on our website at www.victaulic.com.

WARRANTY

Refer to the Warranty section of the current Price List or contact Victaulic for details.

NOTE

This product shall be manufactured by Victaulic or to Victaulic specifications. All products to be installed in accordance with current Victaulic installation/assembly instructions. Victaulic reserves the right to change product specifications, designs and standard equipment without notice and without incurring obligations.
