

Style 230S Non-Restrained Flexible Coupling

Victaulic Bolted Split-Sleeve Products (VBSP) Style 230S stainless steel couplings (formerly Depend-O-Lok ExE) provide a non-restrained, flexible pipe joint that satisfies the requirements set forth by the AWWA C227 Standard for Bolted, Split-Sleeve Restrained and Non-Restrained Couplings for Plain-End Pipe.

This style of coupling is typically used in buried or exposed pipe applications for flexible field joint connections where either joint restraint due to thrust is not a requirement or can be accommodated using an external joint harness system such as an AWWA M11 restraint harnesses. External restraints must be installed to ensure the coupling does not exceed published values for allowable movement. Typical applications include liquid and gaseous media piping, ethanol and other chemical plant piping, pulp and paper industry piping and other piping applications that require a corrosion resistant, non-restrained flexible connections.

The dual-arched mechanical coupling body houses o-ring gaskets that provide the radial seal around the circumference of the pipe, while a sealing plate provides for the axial seal across the coupling body and pipe joint. The Style 230S coupling housing is designed to accommodate hoop stress to meet system pressure requirements while maintaining a leak-proof joint seal. The Style 230S couplings also perform at negative pipe pressures up to full vacuum. The o-ring gasket is not pressure responsive and therefore does not require internal pipe pressure to assist with the seal. The arched cross-sectional shape of the coupling provides for a high section modulus to resist forces encountered during negative pressure (submerged) or vacuum service.

Style 230S couplings are available in standard nominal sizes from 3 – 96"/80 – 2400 mm with larger sizes available based on design and application requirements. The Style 230S non-restrained coupling can accommodate operating pressures up to 300 psi/2065 kPa depending on the actual pipe diameter. For pressures and sizes not shown in the dimension and performance tables contact Victaulic for information on our engineered products.

Style 230/230S couplings provide a flexible pipe connection and are not designed or intended to transfer significant shear, bending or axial loads across the pipe joint. Therefore a single coupling will not allow for differential settlement to occur at the joint. However a minimum of two flexible couplings designed to allow dynamic (in-service) deflection and installed in combination can be used to accommodate differential settlement at a pipe joint or between a pipeline and a structure. Style 230S couplings provide ½"/15mm of axial movement and are not designed for use as an expansion coupling. Victaulic recommends Style 233/233S couplings for this purpose as they are specifically designed to allow for dynamic deflection and provide thrust restraint at the joint. Refer to submittal publications 60.07 and 60.08 for product details and 26.20 for guidelines regarding the use of these couplings in differential settlement application.

All flexible mechanical couplings should be properly supported to minimize or eliminate undesirable loads at the joint. Pipe support requirements are defined within Victaulic Application Guidelines. Please see submittal 26.20.

For proper closure tool selection see column marked Tool Type on pages 6-7.

PRODUCT GUIDE

Product Style Guide			
Submittal Number	Style Number	Coupling/Body Material	Application
60.01	230	Carbon Steel	Non-Restrained Coupling
60.02	230S	Stainless Steel	Non-Restrained Coupling
60.03	231	Carbon Steel	Expansion Coupling
60.04	231S	Stainless Steel	Expansion Coupling
60.05	232	Carbon Steel	Restrained Coupling
60.06	232S	Stainless Steel	Restrained Coupling
60.07	233	Carbon Steel	Restrained Coupling For Dynamic Joint Deflection
60.08	233S	Stainless Steel	Restrained Coupling For Dynamic Joint Deflection
60.09	234	Carbon Steel	Restrained Single-Gasket Coupling
60.10	234S	Stainless Steel	Restrained Single-Gasket Coupling

SEGMENTED COUPLINGS

The Style 230S dimensional tables list the minimum number of coupling housing segments for a particular pipe size. For special applications, non-restrained couplings are available in two (or more) segments to allow for installation of the coupling over an existing pipe joint or to facilitate ease of handling for larger size couplings. The o-ring gaskets (except Silicone) can be furnished “split” to allow for field bonding when an existing pipe joint configuration does not allow for installation of a complete o-ring onto the pipe end.

BODY TYPE

Cross-Sections

NOTE: Body type is not optional and will be determined by system requirements.

Type 1 coupling is the basic split-sleeve coupling that provides for a flexible, non-restrained pipe joint and is generally used for smaller diameter, low pressure applications.

Type 2 coupling is a shouldered coupling. This coupling is designed to accommodate higher pressures for certain pipe diameters. The shoulders welded to the edge of the coupling body provide a vertical bearing surface and provide additional cross-sectional stiffness and typically allow for more angular deflection at the joint than a Type 1 coupling.

Style 230S Non-Restrained Flexible Coupling

COUPLING COMPONENTS

1. Body – Dual arch cross-section used on Type 1 and 2.

2. Shoulders (Type 2 only) – Provide additional stiffness, allow for larger o-ring to accommodate angular deflection at the pipe joint.

3. Closure Plates – Low profile bolt pads for installation and tightening of coupling; gap between plates of installed coupling allows for field flexibility.

4. Sealing Plate – Provides axial seal across the coupling body and pipe joint.

5. O-ring Gaskets – Provide circumferential seal.

6. Fasteners

Studs – High Strength Threaded Rod

Nuts – Heavy Hex Nuts

Washers – SAE small pattern flat washers

MATERIAL SPECIFICATIONS

Body

Stainless Steel conforming to ASTM A240 316/316L

Shoulders (Type 2)

Stainless Steel conforming to ASTM A240 316L

Closure Plates

Stainless Steel conforming to 316L

Sealing Plate

Stainless Steel conforming to ASTM A240 316L

O-ring Gaskets

Standard (Specify choice on order):

- **EPDM** -30°F to +230°F/-34°C to +110°C
Cold and hot water within allowable temperature range; dilute acids; excellent resistance to the deteriorative effects of ozone, oxygen, heat and most chemicals not involving hydrocarbons.
NOT RECOMMENDED FOR PETROLEUM SERVICES.
 - **Silicone** -30°F to +350°F/-34°C to +177°C
Dry, hot air applications; excellent resistance to many chemicals.
NOT RECOMMENDED FOR HOT WATER OR STEAM APPLICATIONS.
 - **Isoprene** -40°F to +160°F/-40°C to +71°C
Water; salt water; sewage; good resistance to oxygen and dilute acids

Services listed are general service recommendations only. Refer to a chemical elastomer guide for specific applications and suitability of gasket material for services that are not listed.
- Optional gasket (specify choice on order):
- **Nitrile** -20°F to +180°F/-28°C to +82°C
Water; petroleum products, vegetable and mineral oils; air with oil vapors within allowable temperature range; good resistance to hydrocarbons; acids and bases.
 - **Fluoroelastomer** +20°F to +300°F/-7°C to +149°C
Outstanding resistance to heat and most chemicals.
 - **Neoprene** -30°F to +180°F/-34°C to +82°C
Water and wastewater; good resistance to ozone, effects of UV and some oils.

Restraint Rings

Stainless Steel conforming to ASTM A276 316L

Permanent Fasteners

Studs - Stainless Steel conforming to ASTM A193 Grade B8M 316 Class 2

Nuts - Heavy hex nuts

Stainless Steel conforming to ASTM A194 Grade 8M 316

Washers - Stainless Steel Type 316 SAE pattern

Installation Fasteners (for installation purposes only , supplied with Type 2 and Type 3 couplings)

Studs - Carbon Steel conforming to ASTM A193 Grade B7 zinc plated

Nuts - Heavy hex nuts

Carbon Steel conforming to ASTM A194 Grade 2H zinc plated

Washers - Carbon Steel SAE small pattern flat washers conforming to ASTM F436 SAE pattern zinc plated

Style 230S Non-Restrained Flexible Coupling

**PIPE END DIMENSIONAL
TOLERANCE AND OVALITY**

For specific pipe diameter tolerances, pipe ovality (roundness) requirements and minimum/maximum pipe diameter allowance, refer to the tables included in the Installation Manuals (below) and 26.20 Application Guidelines.

- (1) Couplings must be used on pipe with a minimum wall thickness that meets the requirements of AWWA C220 for stainless steel pipe.
 (2) Actual pipe O.D. required at time of order. For actual pipe O.D. round down to the nearest 1/8" to determine proper coupling size required.
 (3) For allowable test or transient pressure, the maximum working pressure may be increased to 1 1/2 times the values shown.
 (4) 1-segment couplings may be available as 2-segment couplings to allow for in-place pipe installations. Contact Victaulic for details.
 (5) Coupling weights are based on nominal pipe diameter and include all accessories. Weight may vary based on actual size of pipe.
 (6) Closure Tool Recommendations:*

A= CTM-01 Small Manual Closure Tool
 B= CTM-02 Large Manual Closure Tool
 C= CTH-01 10-Ton Hydraulic Closure Tool

*For more details on closure tools refer to page 10.

Note: The data in this table only applies when stainless steel couplings are being used on stainless steel pipe.

(1) For allowable test or transient pressure, the maximum working pressure may be increased to 1½ times the values shown.

(2) Style 230 couplings provide ½"/15 mm of axial movement within the published pipe end separation range and are not designed for use as an expansion coupling.

(3) Published deflection values are intended for installation only. Allowable in-service or dynamic deflection is limited by the maximum allowable axial movement at the joint. Contact Victaulic for details.

(1) For allowable test or transient pressure, the maximum working pressure may be increased to 1½ times the values shown.

(2) Style 230 couplings provide ½"/15 mm of axial movement within the published pipe end separation range and are not designed for use as an expansion coupling.

(3) Published deflection values are intended for installation only. Allowable in-service or dynamic deflection is limited by the maximum allowable axial movement at the joint. Contact Victaulic for details.

Style 230S Non-Restrained Flexible Coupling

CLOSURE TOOLS

MANUAL TOOL

HYDRAULIC TOOL

Manual Tools

- CTM-01: for use on 5" and 8" body widths
- CTM-02: for use on 10" body widths
for use on 12" body widths with thickness of $\frac{3}{16}$ " or less

Hydraulic Tools

- CTH-01*: for use on 12" body widths with thickness of $\frac{1}{4}$ " or greater
for use on 14", 16" and 18" body widths
- CTH-02: for use on all type 3 couplings

- Hydraulic tool package comes standard with:

- one (1) tool head
- one (1) hydraulic cylinder
- one (1) hydraulic hose
- one (1) hand pump

* A CTH-01 hydraulic closure tool can be used in applications where the CTM-02 manual closure tool is recommended.

Note: The closure tools listed above are designed specifically for Victaulic Style 230, 231, 232 and 233 couplings. If ordering custom product, contact Victaulic for appropriate tool selection.

Style 230S Non-Restrained Flexible Coupling

PRODUCT CONFIGURATOR

[^] Couplings are available in a range of nominal sizes from 3 – 96". For systems above 96" contact Victaulic for details.

* For actual pipe O.D. round down to the nearest 1/8" to determine proper coupling size required.

ENGINEERED PRODUCTS OPTIONS

For non-standard products the Victaulic Engineered Products group can assist with specialty joints designed to meet the specific size, pressure and temperature requirements of your system. The Engineered Products group will also provide pricing and availability for options such as pipe stops and insulating sleeves.

WARRANTY

Refer to the Warranty section of the current Price List or contact Victaulic for details.

NOTE

This product shall be manufactured by Victaulic or to Victaulic specifications. All products to be installed in accordance with current Victaulic installation/assembly instructions. Victaulic reserves the right to change product specifications, designs and standard equipment without notice and without incurring obligations.

TESTING

Victaulic Style 230S couplings are designed to allow for a 50 percent increase over the published maximum working pressure for test and/or transient pressures. Due to the huge volume of air that can be involved in jobsite air testing and the nature of air or gas that is pressurized, jobsite air testing should be limited to 25 psi/175 kPa or less.
